

June 2012 Features

EDITORIAL DEADLINE: 11 MAY

BOOKING DEADLINE: 03 MAY

MATERIAL DEADLINE: 11 MAY

PUBLISHED DATE: 31 MAY

Hard Rock Mining

Hard rock mining encompasses essentially everything outside of coal. Every month, millions of tonnes of rock are cut, broken or drilled. A substantial portion of these rocks are hard and have high breakage strengths. Traditional rock-cutting materials wear quickly on these materials and reduce the rate of mining. In this issue, *Australian Mining* will cover the developments in rock-cutting and drilling materials. This feature area will also cover new equipment and services as well as the issues that are affecting hard rock miners and the hard rock industry.

Minerals Processing

Australian Mining's minerals processing technology feature focuses on recent technical developments which are advancing to deal with the processing of increasingly complex and refractory ores. This feature will highlight the developments and the challenges facing the mineral processor, particularly with regard to the environmental problems posed in improving the efficiency of the existing processes and also in dealing with the waste created.

Quarrying, Crushing & Screening

Australian Mining is now open for submissions for its upcoming June 2012 edition. This issue

provides information on the latest technology and techniques in quarrying, crushing and screening from key manufacturers and suppliers to get more out of equipment. This section is a great opportunity for suppliers to take advantage of having information on new equipment published in the magazine.

Maintenance & Monitoring

Plant engineers and maintenance managers know from experience: mining equipment will break down, often at the worst possible moment. Companies must head off these breakdowns with a preventive-maintenance management program that is both systematic and flexible and geared toward minimising downtime and maximising equipment life. *Australian Mining* will cover the latest trends and developments in maintenance management and cover the latest equipment and services.

Conveyors & Materials Handling

In the upcoming June edition, *Australian Mining* will report on the latest technology and best practice in conveyors and conveyor maintenance. With plants reliant on the ability to move large amounts of ore effectively and safely, up to date information on the latest technology and techniques to maximise output is a must. This section is a great opportunity for suppliers

to take advantage of having information on new equipment published in the magazine FREE OF CHARGE. However, editorial space in the feature is at a premium, so get your editorial in early with a high resolution image to maximize your chances of being published. To submit an article, propose a story idea, or send in details, email ozmining@reedbusiness.com.au

Victoria & Tasmania Spotlight

Despite their smaller area, Australia's two southern states still have a strong mining history and future. With Victoria's huge potential for its brown coal fields and Tasmania's position as the nation's largest tin generator, the two are often forgotten for the larger mining states of Western Australia, Queensland and New South Wales. In this issue, *Australian Mining* looks at the latest developments, technology and the future of mining in Tasmania and Victoria.

Product Focus: Test and Measurement

The Product Focus section is a great opportunity for suppliers to take advantage of having information on new equipment published in the magazine FREE OF CHARGE. However, editorial space in the feature is at a premium, so get your editorial in early with a high resolution image to maximize your chances of being published.
